

FlightScope

unbeatable in light spaces

Indoor & Outdoor launch & ball tracking monitor

The Kudu is the ideal high end Launch Monitor, providing an extensive set of measured parameters of a golf shot. Unlike some other products on the market (including camera based systems), the Kudu measures the true 3-dimensional trajectory of the ball flight. Also, ball spin is directly measured at unsurpassed accuracy in this field.

Measured Parameters:

- Ball - speed, carry, trajectory, spin, launch angle
- Club - speed, path, smash factor

Other features:

- Shot Classification
- Grouping Measurement
- First order statistics of all shots
- Real Time ball tracking (outdoors mode)
- Printed reports
- Left & right handed player support

Applications:

- Club fitting
- Game improvement
- Golf days
- Coaching
- Club & ball comparison

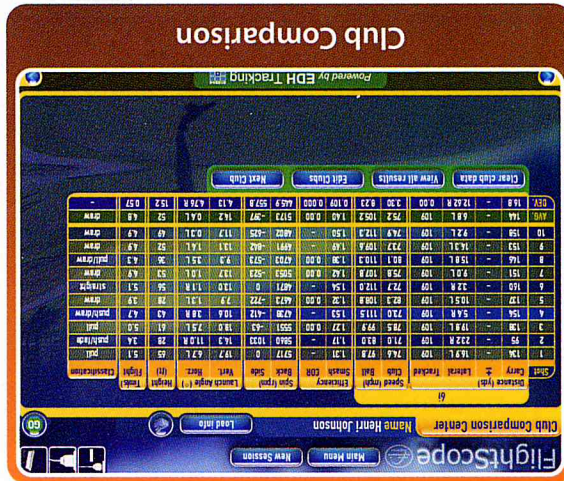

Powered by EDH Tracking

NEW: "Optimizer"

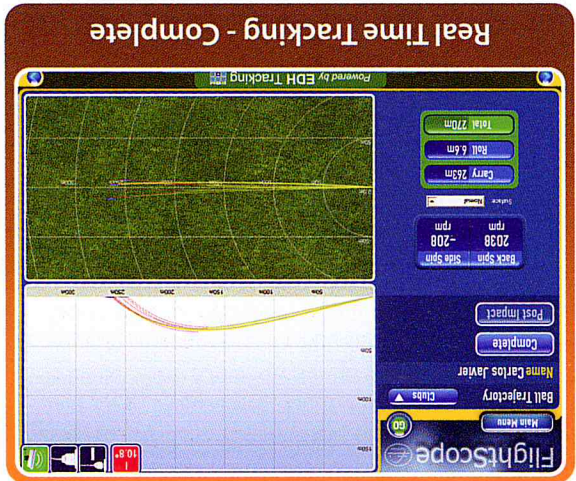

Ever wonder how different launch angles or ball spin can increase your distance? Now FlightScope calculates optimal launch factors for a particular swing.
